(A kind of high-quality plastic sequin coated with metal film, commonly known as scallion slices in Taiwan factories.) and a mixture of high concentration of chemical salt water. The proportion of the two is basically the same. Therefore, when the bottom bulb is lit, the heat of the bulb is transferred to the liquid, forming convection. At the same time, the scallion slices also move and rotate irregularly, and the light is emitted to all directions at the same time, forming a dreamlike effect. The scallion slices inside will float up and down continuously, and the sequins will produce the dynamic effect of flowing light and color with the flow of water. The sequins of different shapes will give you a colorful and beautiful dynamic picture.
